A great book for new A2s.

By John Kerswell

I recommend this book to all new A2s. It assumes you know "audio", so deep technical writing is bypassed for a broad and comprehensive depiction of the responsibilities and tools with which an A2 must be acquainted. Read it cover to cover; when you're on the job it'll be as if you've been there and done that. Throughout the book you'll be introduced to folks already working in the television audio world; May you find yourself working with them someday!

Television Sound Engineering

By Robert J. Harker

Although I haven't completely read the book, I have found it to be well written in understandable terms. It will make a good reference for any audio engineer to have in his professional library.
