Build advanced authentication solutions for any cloud or web environment

Active Directory has been transformed to reflect the cloud revolution, modern protocols, and today's newest SaaS paradigms. This is an authoritative, deep-dive guide to building Active Directory authentication solutions for these new environments. Author Vittorio Bertocci drove these technologies from initial concept to general availability, playing key roles in everything from technical design to documentation. In this book, he delivers comprehensive guidance for building complete solutions. For each app type, Bertocci presents high-level scenarios and quick implementation steps, illuminates key concepts in greater depth, and helps you refine your solution to improve performance and reliability. He helps you make sense of highly abstract architectural diagrams and nitty-gritty protocol and implementation details. This is the book for people motivated to become experts.

Active Directory Program Manager Vittorio Bertocci shows you how to:

- Address authentication challenges in the cloud or on-premises
- Systematically protect apps with Azure AD and AD Federation Services
- Power sign-in flows with OpenID Connect, Azure AD, and AD libraries
- Make the most of OpenID Connect's middleware and supporting classes
- Work with the Azure AD representation of apps and their relationships
- Provide fine-grained app access control via roles, groups, and permissions
- Consume and expose Web APIs protected by Azure AD
- Understand new authentication protocols without reading complex spec documents

Clarity for a complex topic

By Orin Thomas

I referenced this book when researching a Pluralsight course that included Azure AD. I found the author's writing style engaging and concise. The author was able to provide clarity on the complex concepts involved in Azure AD authentication and I was able to learn what needed to know about this challenging topic.

Required Reading for Microsoft Developers

By Scot Hillier

Vittorio is a well-known expert in the field of web application authentication with Azure Active Directory (AAD) and Active Directory Federated Services (ADFS). That expertise comes shining through in this book, which is a great combination of history, theory, and hands-on exercises. This book meets a serious need in the community for better understanding of Open Authentication (OAuth) and OpenID Connect. In my opinion, the general lack of understanding within some corners of the development community is preventing organizations from effectively moving to the cloud because their development teams do not understand how to make the transition with mission-critical applications. I routinely see code intended for use with Windows authentication being applied to web applications, and developers can't figure out what's wrong. If you cannot adequately explain OAuth and OpenID Connect, if you can't implement these technologies in both server-side and client-side apps, then get this book and read it cover to cover. This book has the information you need to be relevant in a cloud world.

The special asides tossed in are useful material too

By J Arkills

Chapters 8 and 9 are the gold within this book, providing details on Azure AD Applications not well documented elsewhere. Vittorio's mastery of this topic as a developer is really well showcased in these two chapters, as he references the protocol background he carefully laid in prior chapters. Vittorio carefully steps you from one concept to the next using concrete examples in Visual Studio, to avoid overwhelming you with too many things at once. The special asides tossed in are useful material too, often emphasizing important things to consider when writing your own Azure AD application.

Early in the book Vittorio makes a prediction about reviews of the book. I won't say I disagree with his prediction, but I'm also really thankful he wrote it the way he did. Those first several chapters may be slower or not as exciting, but I appreciated them all the same--having the background of both how the protocol flow works and how the protocols came to be is very helpful.
